

Want to try the system  
to discuss a patient?

Or go to our main page of CPMS 2.0  
(<https://cpms2.ern-net.eu>)

For first time users, you will need to **register yourself** and the **hospital** you are affiliated with. In case you are registering as an expert within rare and low prevalence complex diseases or conditions, you will need to mark your **expertise** through **thematic** (and sub-thematic areas).

After an **internal validation** (on average within 24 hours), you will receive a **confirmation mail** that you have successfully entered the system.

CPMS 2.0 works with a **two-factor authenticator** namely EU login.

A **guide** to connecting using the two-factor authenticator can be found on our *YouTube* channel.

# CPMS 2.0

The one platform to GDPR-proof discuss your patients within the European Reference Networks

The mission of the **ERN ReCONNET** is to create a framework aimed at improving quality, safety and access to highly specialised and sustainable healthcare for European patients with rCTDs. Within that mission, improving the real-time medical care through the **in-depth case discussion** is very beneficial.

Therefore, a Clinical Patient Management system has been created and **relaunched in 2025** to allow clinicians from both **university** as well as **regional** centers within Europe **to discuss the patients with acknowledged experts**.

Currently, the platform hosts over **3000 experts** from all 24 Reference Networks within Europe.

**IT platform supporting medical collaboration and discussions**

Clinical care functions  
Desktop + Mobile

**Secure and GDPR compliant**

**Architecture**  
Modular  
Open source

**Intuitive and easy to use!**

## What is new within CPMS 2.0?

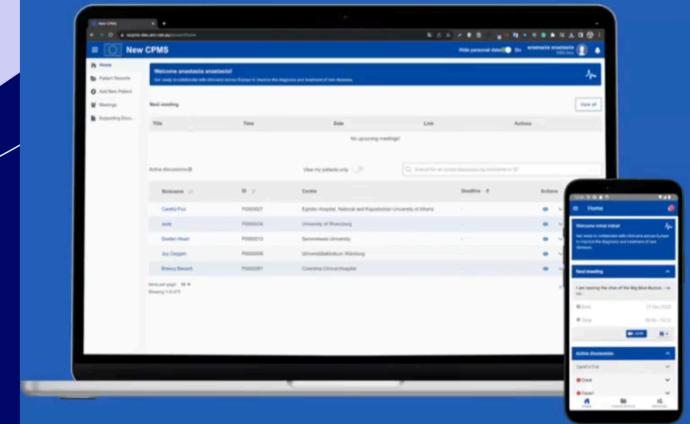

The CPMS is a secure IT platform to facilitate cross-border medical discussions and support the ERNs in the diagnosis and treatment of rare and low prevalence complex diseases or conditions.

The platform allows **video** and **chat** discussions, as well as *linking patient files, history or imaging within the platform*.

The module to find as well as **invite experts** is **intuitive and user-friendly**.

A **share-screen option** is available to present the case for feedback. The expert advice given is also non-legally binding.

Moreover, **an assistant** can be added to the patient discussion case for an even more practical discussion.

Seamless internal sign-ups

Clear patient record view

Cross-ERN collaboration

Regional access

In-system file upload

Streamlined discussions  
(chat / video call / screen share)
